SCORE OVER LENGTH SEARCHES

Attached is a score over length search. This search was developed to overcome limitations in most standard search systems which favor large sequences with high scoring, but lesser overall identity over smaller sequences with higher overall identity. This search is especially useful for relatively small nucleic acid or polypeptide target sequences (antisense, fragments, probes, primers, RNAi, epitopes, haptens, etc.) claimed functionally via a form of hybridization and/or identity language and having defined upper and lower polynucleotide and or polypeptide length limits.

The score over length search is performed by first running the query sequence using examiner-specified identity and polynucleotide or protein length limit parameters, and saving 65,000 hits and 0 alignments from each desired database. The resulting output is reformatted using a Microsoft Word macro and is imported into Excel. The summary table data are then sorted by the ratio of score of each hit sequence divided by its length and the accession numbers for all hits below the examiner's desired score over length parameters are deleted. The remaining accession numbers are used to pull the corresponding sequences from the databases into subdatabases enriched for good hits and the query sequence is re-run against these subdatabases to yield the final results.

The score over length cutoff for this search is 70%, length 100 - 7582 nt

Examiner Please Note: This cover sheet should be included when submitting results to be scanned.

No suitable hits were found in Published Applications NA_New
No results from this file included here.

Database : unidb:*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

CC -!- FUNCTION: Retroviral envelope proteins mediate receptor
CC recognition and membrane fusion during early infection. Endogenous
CC envelope proteins may have kept, lost or modified their original
CC function during evolution. This endogenous envelope protein has
CC retained its original fusogenic properties. It can make
CC pseudotypes with HIV-1 virions and confer infectivity. It
CC participates to trophoblast fusion during placenta morphogenesis.
CC In vitro it fuses cells expressing the type D mammalian retrovirus
CC receptors SLC1A4 and SLC1A5. It can induce cellular resistance to
CC spleen necrosis virus in vitro.
CC -!- FUNCTION: SU mediates receptor recognition (By similarity).
CC -!- FUNCTION: TM anchors the envelope heterodimer to the viral
CC membrane through one transmembrane domain. The other transmembrane
CC domain, called fusion peptide, mediates fusion of the viral
CC membrane with the target cell membrane (By similarity).
CC -!- SUBUNIT: The surface (SU) and transmembrane (TM) proteins form a
CC heterodimer. SU and TM are attached by noncovalent interactions or
CC by a labile interchain disulfide bond (By similarity).
CC -!- TISSUE SPECIFICITY: Expressed at higher level in placenta.
CC Expressed at lower level in adrenal tissue, bone marrow, breast,
CC colon, kidney, ovary, prostate, skin, spleen, testis, thymus,
CC thyroid and trachea. Low expression is observed in the brain. Both
CC mRNA and protein levels are significantly increased in the brain
CC of individuals with multiple sclerosis, particularly in astrocytes
CC and microglia.
CC -!- DEVELOPMENTAL STAGE: In placenta, detected at higher level during
CC early pregnancy and at lower level during late pregnancy.
CC -!- DOMAIN: The CKS-17 immunosuppressive domain is present in many
CC retroviral envelope proteins. As a synthetic peptide, it inhibits
CC immune function in vitro and in vivo (By similarity).
CC -!- PTM: Specific enzymatic cleavages in vivo yield the mature SU and
CC TM proteins (By similarity).

RT   "The endogenous retroviral locus ERVWE1 is a bona fide gene involved
RT   in hominoid placental physiology.";
RL   Proc. Natl. Acad. Sci. U.S.A. 101:1731-1736(2004).
CC   -!- FUNCTION: Retroviral envelope proteins mediate receptor
CC       recognition and membrane fusion during early infection. Endogenous
CC       envelope proteins may have kept, lost or modified their original
CC       function during evolution. This endogenous envelope protein has
CC       retained its original fusogenic properties. In vitro it fuses
CC       cells expressing the type D mammalian retrovirus receptors SLC1A4
CC       and SLC1A5.
CC   -!- FUNCTION: SU mediates receptor recognition (By similarity).
CC   -!- FUNCTION: TM anchors the envelope heterodimer to the viral
CC       membrane through one transmembrane domain. The other transmembrane
CC       domain, called fusion peptide, mediates fusion of the viral
CC       membrane with the target cell membrane (By similarity).
CC   -!- SUBUNIT: The surface (SU) and transmembrane (TM) proteins form a
CC       heterodimer. SU and TM are attached by noncovalent interactions or
CC       by a labile interchain disulfide bond (By similarity).
CC   -!- DOMAIN: The CKS-17 immunosuppressive domain is present in many
CC       retroviral envelope proteins. As a synthetic peptide, it inhibits
```

```
CC       immune function in vitro and in vivo (By similarity).
CC   -!- PTM: Specific enzymatic cleavages in vivo yield the mature SU and
CC       TM proteins (By similarity).
CC   -!- PTM: The CXXC motif is highly conserved across a broad range of
CC       retroviral envelope proteins. It is thought to participate to the
CC       formation of a labile disulfide bond possibly with the CX6CC motif
CC       present in the transmembrane protein (By similarity).
CC   -!- MISCELLANEOUS: Ortholog of the human HERV-W_7q21.2 envelope
CC       protein.
CC   -!- SIMILARITY: Belongs to the gamma type-C retroviral envelope
CC       protein family. ERV class-I W subfamily.
CC   -!- CAUTION: CKS-17 sequence does not match the minimal active
CC       concensus.

RT   "The endogenous retroviral locus ERVWE1 is a bona fide gene involved
RT   in hominoid placental physiology.";
RL   Proc. Natl. Acad. Sci. U.S.A. 101:1731-1736(2004).
CC   -!- FUNCTION: Retroviral envelope proteins mediate receptor
CC       recognition and membrane fusion during early infection. Endogenous
CC       envelope proteins may have kept, lost or modified their original
CC       function during evolution. This endogenous envelope protein has
CC       retained its original fusogenic properties. In vitro it fuses
CC       cells expressing the type D mammalian retrovirus receptors SLC1A4
CC       and SLC1A5.
CC   -!- FUNCTION: SU mediates receptor recognition (By similarity).
CC   -!- FUNCTION: TM anchors the envelope heterodimer to the viral
CC       membrane through one transmembrane domain. The other transmembrane
CC       domain, called fusion peptide, mediates fusion of the viral
CC       membrane with the target cell membrane (By similarity).
CC   -!- SUBUNIT: The surface (SU) and transmembrane (TM) proteins form a
CC       heterodimer. SU and TM are attached by noncovalent interactions or
CC       by a labile interchain disulfide bond (By similarity).
CC   -!- DOMAIN: The CKS-17 immunosuppressive domain is present in many
CC       retroviral envelope proteins. As a synthetic peptide, it inhibits
CC       immune function in vitro and in vivo (By similarity).
CC   -!- PTM: Specific enzymatic cleavages in vivo yield the mature SU and
CC       TM proteins (By similarity).
CC   -!- PTM: The CXXC motif is highly conserved across a broad range of
CC       retroviral envelope proteins. It is thought to participate to the
CC       formation of a labile disulfide bond possibly with the CX6CC motif
CC       present in the transmembrane protein (By similarity).
CC   -!- MISCELLANEOUS: Ortholog of the human HERV-W_7q21.2 envelope
CC       protein.
CC   -!- SIMILARITY: Belongs to the gamma type-C retroviral envelope
CC       protein family. ERV class-I W subfamily.
CC   -!- CAUTION: CKS-17 sequence does not match the minimal active
CC       concensus.

RA   Lucotte G., Duret L., Mandrand B.;
RT   "The endogenous retroviral locus ERVWE1 is a bona fide gene involved
RT   in hominoid placental physiology.";
RL   Proc. Natl. Acad. Sci. U.S.A. 101:1731-1736(2004).
CC   -!- FUNCTION: Retroviral envelope proteins mediate receptor
CC       recognition and membrane fusion during early infection. Endogenous
CC       envelope proteins may have kept, lost or modified their original
CC       function during evolution. This endogenous envelope protein has
CC       retained its original fusogenic properties. In vitro it fuses
CC       cells expressing the type D mammalian retrovirus receptors SLC1A4
CC       and SLC1A5.
CC   -!- FUNCTION: SU mediates receptor recognition (By similarity).
CC   -!- FUNCTION: TM anchors the envelope heterodimer to the viral
CC       membrane through one transmembrane domain. The other transmembrane
CC       domain, called fusion peptide, mediates fusion of the viral
CC       membrane with the target cell membrane (By similarity).
CC   -!- SUBUNIT: The surface (SU) and transmembrane (TM) proteins form a
CC       heterodimer. SU and TM are attached by noncovalent interactions or
CC       by a labile interchain disulfide bond (By similarity).
CC   -!- DOMAIN: The CKS-17 immunosuppressive domain is present in many
CC       retroviral envelope proteins. As a synthetic peptide, it inhibits
CC       immune function in vitro and in vivo (By similarity).
CC   -!- PTM: Specific enzymatic cleavages in vivo yield the mature SU and
CC       TM proteins (By similarity).
CC   -!- PTM: The CXXC motif is highly conserved across a broad range of
CC       retroviral envelope proteins. It is thought to participate to the
CC       formation of a labile disulfide bond possibly with the CX6CC motif
CC       present in the transmembrane protein (By similarity).
CC   -!- MISCELLANEOUS: Ortholog of the human HERV-W_7q21.2 envelope
CC       protein.
CC   -!- SIMILARITY: Belongs to the gamma type-C retroviral envelope
CC       protein family. ERV class-I W subfamily.
CC   -!- CAUTION: CKS-17 sequence does not match the minimal active
CC       concensus.

PT New nucleic acid sequences of human endogenous retrovirus, HERV-7q, used
PT for diagnosis, treatment and prevention of autoimmune and neurological
PT diseases.
XX
PS Example 4; Fig 19; 225pp; French.
XX
CC The present invention relates to new nucleic acid sequences of human
CC endogenouse retrovirus, HERV-7q, which is located on chromosome 7q.
CC Regulatory elements associated with HERV-7q may alter expression of other
CC genes (even remote genes) on the same chromosome, inducing immunological
CC and/or neurological changes (which may be pathological or protective/
CC curative). HERV-7q peptides can be used to improve efficiency of the
CC immune response, e.g. in immunotherapy. HERV-7q peptides and their coding
CC sequences can be used in immunogenic or vaccinating compositions, for
CC protection against autoimmune diseases, particularly multiple sclerosis.
CC The peptides may also be used (by sequence comparison) to detect/identify
CC endogenous retroviruses that are abnormally expressed in cancer,
CC neuropathologies or other autoimmune diseases. The present sequence was
CC used to illustrate the invention.

PT New nucleic acid sequences of human endogenous retrovirus, HERV-7q, used
PT for diagnosis, treatment and prevention of autoimmune and neurological
PT diseases.
XX
PS Claim 22; Page 152-154; 225pp; French.
XX
CC The present invention relates to new nucleic acid sequences of human
CC endogenouse retrovirus, HERV-7q, which is located on chromosome 7q.
CC Regulatory elements associated with HERV-7q may alter expression of other
CC genes (even remote genes) on the same chromosome, inducing immunological
CC and/or neurological changes (which may be pathological or protective/
CC curative). HERV-7q peptides can be used to improve efficiency of the
CC immune response, e.g. in immunotherapy. HERV-7q peptides and their coding
CC sequences can be used in immunogenic or vaccinating compositions, for
CC protection against autoimmune diseases, particularly multiple sclerosis.
CC The peptides may also be used (by sequence comparison) to detect/identify
CC endogenous retroviruses that are abnormally expressed in cancer,
CC neuropathologies or other autoimmune diseases. The present sequence was
CC used to illustrate the invention

PT New nucleic acid sequences of human endogenous retrovirus, HERV-7q, used
PT for diagnosis, treatment and prevention of autoimmune and neurological
PT diseases.
XX
PS Claim 22; Fig 4; 225pp; French.
XX
CC The present invention relates to new nucleic acid sequences of human
CC endogenouse retrovirus, HERV-7q, which is located on chromosome 7q.
CC Regulatory elements associated with HERV-7q may alter expression of other
CC genes (even remote genes) on the same chromosome, inducing immunological
CC and/or neurological changes (which may be pathological or protective/
CC curative). HERV-7q peptides can be used to improve efficiency of the
CC immune response, e.g. in immunotherapy. HERV-7q peptides and their coding
CC sequences can be used in immunogenic or vaccinating compositions, for
CC protection against autoimmune diseases, particularly multiple sclerosis.
CC The peptides may also be used (by sequence comparison) to detect/identify
CC endogenous retroviruses that are abnormally expressed in cancer,
CC neuropathologies or other autoimmune diseases. The present sequence was
CC used to illustrate the invention

PT Identifying a patient with a higher risk of preeclampsia comprises

PT nucleic acid hybridization assay or antibody assay to determine level of
PT a specific nucleic acid (mRNA) or polypeptide.
XX
PS Claim 2; SEQ ID NO 1395; 358pp; English.
XX
CC The invention relates to a method for identifying a patient with a higher
CC risk of preeclampsia. The method comprises: (a) assaying a sample from
CC the patient to determine the level of a mRNA or other polynucleotide
CC within the sample that hybridizes specifically to a polynucleotide of
CC AED73173-AED74024, and comparing the level to a standard; or (b)
CC contacting a sample from the patient with an antibody that specifically
CC binds to a polypeptide of AED74025-AED74876 to determine the level of
CC polypeptide within the sample, and comparing the level to a standard.
CC Also described: (1) a diagnostic kit, for detecting preeclampsia,
CC comprising: (a) an antibody specific for any of the polypeptides of
CC AED74025-AED74876 or their fragments; or (b) a polynucleotide sequence
CC comprising any of AED73173-AED74024 coupled to a surface; and (c) a
CC standard for any of the polypeptides of AED74025-AED74876 or any of the
CC polynucleotides of AED73173-AED74024 indicative of a higher risk of
CC diagnosis of preeclampsia; (2) a pharmaceutical composition comprising an
CC antibody specific for any of the polypeptides of AED74025-AED74876 or one
CC or more purified polypeptides of AED74025-AED74876, to ameliorate signs
CC or symptoms of preeclampsia; and (3) a method of treating preeclampsia.
CC The method and kit are useful for identifying a patient with a higher
CC risk of preeclampsia. The composition and method are useful for treating
CC preeclampsia. The present sequence represents an amino acid sequence
CC encodes by a nucleic acid sequence obtained from a human placental cDNA
CC library. Note - The sequence data for this patent did not form part of
CC the printed specification, but was obtained in electronic format directly
CC from the USPTO web site.

CC   This sequence represents the open reading frame 1 encoding the env
CC   protein from the human endogenous retrovirus (HERV) W (AAX25665). Nucleic
CC   acids, their fragments or peptides encoded by them derived from the HERV-
CC   W genome are markers of autoimmune disease (e.g. multiple sclerosis,
CC   rheumatoid polyarthritis, disseminated lupus erythematosus, insulin-
CC   dependent diabetes and related pathologies) and of abnormal or
CC   unsuccessful pregnancy and can be used as chromosomal markers for
CC   susceptibility to these conditions, or proximity markers of genes
CC   associated with this susceptibility

PT New human retrovirus HERV-W ENV proteins/peptides having superantigen
PT activity useful for diagnosing and treating multiple sclerosis.
XX
PS Claim 1; Fig 7; 94pp; English.
XX
CC On the basis of the PBS t-RNA motif used for the classification of human
CC endogenous retrovirus (HERVs) the full length endogenous provirus which
CC was been located on the long arm of human chromosome 7 (7q21-22) has been
CC designated HERV-W. The present invention describes proteins or peptides
CC (I) having superantigen (SAg) activity comprising the ENV protein (ENV)
CC of HERV-W, the surface protein (SU) and transmembrane (TM) sub-units. (I)
CC have neuroprotective activity, and can be used in: vaccines; antisense-
CC therapy; and HERV-W SAg activity-inhibitors. (I) and encoding DNA/RNA are
CC useful for diagnosing multiple sclerosis (MS) or HERV-W-associated
CC disorders. (I) are also useful for identifying substances (and optionally
CC recovering) capable of binding to a retroviral superantigen associated
CC with MS, substances capable of blocking SAg activity and substances
CC capable of blocking transcription or translation of HERV-W retroviral
CC superantigen. A protein or peptide derived from (I), modified to be
CC devoid of SAg activity and being capable of generating an immune response
CC against HERV-W retroviral SAg is useful in therapy. Nucleic acid
CC molecules encoding (I) are useful as vaccines against MS. Substances
CC capable of blocking SAg activity, capable of binding to a retroviral
CC superantigen associated with MS, or capable of blocking transcription or
CC translation of HERV-W retroviral superantigen for use in treating or
CC preventing MS, obtained using (I) are useful for the treatment and
CC prevention of MS. (I) and nucleic acids encoding them are useful for
CC diagnosing autoimmune disease. The present sequence represents the
CC specifically claimed envelope protein of HERV-W designated G

PT   cells of a tissue or culture, from its ability to induce syncytia.
XX
PS   Claim 1; Page 41-44; 57pp; French.
XX
CC   The present sequence represents a human endogenous retrovirus envelope
CC   protein. The specification describes a method for detecting expression of
CC   an envelope protein from a human endogenous retrovirus (HERV), in cells,
CC   of a tissue or culture. The method comprises detecting syncytia formation
CC   due to the fusogenic properties of the envelope protein. Envelope
CC   polypeptides and polynucleotides are used to produce therapeutic or
CC   prophylactic compositions, particularly for treatment of cancer, to
CC   correct defects in placental development (or other natural formation of
CC   other types of syncytia), and to promote adhesion of cells in grafts or
CC   cellular repair processes. Expression of sequences antisense to the
CC   polynucleotide are used to prevent formation of syncytia

PT New polypeptide capable of modulating the immunosuppressive properties of
PT a viral protein or its fragment, useful for the manufacture of a vaccine
PT for treating or preventing viral infections or cancer.
XX
PS Disclosure; SEQ ID NO 74; 262pp; English.
XX
CC The invention describes a polypeptide of 7-20 amino acid residues, which
CC is capable of modulating the immunosuppressive properties of a viral
CC protein or its fragment, against the host in which it is expressed
CC (immunosuppression-modulatory sequence) when it substitutes the
CC homologous sequence of the viral protein or its fragment, the polypeptide
CC comprising the minimum following consensus amino acid sequence of (I).
CC Also described are: a mutated ENV protein resulting from the mutation of
CC a wild type ENV protein essentially carrying the following sequence: NY 1
CC Y 2 Y 3 LY 4 Y 5 LY 6 Y 7 Y 8 X 1 Y 9 Y 10 Y 11 CY 12 X 2 (II); a nucleic
CC acid coding for the polypeptide or the mutated ENV protein; an eukaryotic
CC or prokaryotic expression vector comprising the nucleic acid as well as
CC the elements necessary for the expression of the nucleic acid; a
CC recombinant cell comprising the nucleic acid or the eukaryotic or

CC prokaryotic expression vector; a pharmaceutical or a vaccine composition
CC comprising as active substance: at least one polypeptide, mutated ENV
CC protein or its fragments, nucleic acid, prokaryotic or eukaryotic
CC expression vector, or recombinant cell; in association with a
CC pharmaceutically acceptable carrier; and antibodies or their fragments,
CC scFv polypeptides, aptamers, or binding peptides, directed against
CC mutated ENV proteins, provided that the antibodies or their fragments,
CC scFv polypeptides, aptamers, or binding peptides do not bind to the
CC corresponding wild type ENV proteins. The first mutation of a first amino
CC acid and optionally of a second mutation of a second amino acid in a wild
CC type viral envelope (ENV) protein is useful for manufacturing a mutated
CC ENV protein having a modified immunosuppressive activity with respect to
CC the wild type ENV protein. The protein is useful for the manufacture of a
CC medicament or a vaccine intended for the prevention and/or the treatment
CC of viral diseases, such as HTLV or FeLV infections; cancer; pathologies
CC requiring an inhibition of the immune system, such as autoimmune
CC diseases, allergies or graft rejections. The protein is also useful for
CC screening compounds liable to modulate the immunosuppressive activity of
CC viruses or tumor cells, where the compounds to screen are peptides, in
CC particular peptides comprising from 5-30 amino acids, such as peptides
CC originating from combinatorial peptide libraries. This is the amino acid
CC sequence of HERV envelope protein.

PT   New polynucleotides encoding secreted proteins.
XX
PS   Claim 14a; Page 101-103; 142pp; English.
XX
CC   This invention describes novel human secreted proteins encoded by
CC   polynucleotides isolated from human adult testes, adult brain, adult
CC   blood or adult placenta, or murine adult bone marrow or thymus cDNA
CC   libraries. The products of the invention are predicted to have biological
CC   activities which would make them suitable for treating, preventing or
CC   ameliorating medical conditions in humans and animals, although no
CC   supporting data is given. Suggested activities include nutritional
CC   activity, cytokine and cell proliferation/differentiation activity,
CC   immune stimulating (e.g. as vaccines) or suppressing activity,
CC   haematopoiesis regulating activity, tissue growth activity,
CC   activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic
CC   and thrombolytic activity, receptor/ligand activity, anti-inflammatory
CC   activity, cadherin/tumour invasion suppressor activity, and tumour
CC   inhibition activity. The polynucleotides are also stated to be useful for
CC   gene therapy

PT   New polynucleotides encoding secreted cDNA libraries, used to develop
PT   products for the diagnosis and treatment of neoplastic disease.
XX
PS   Claim 15; Page 108-110; 149pp; English.
XX
CC   This is the human secreted protein AJ172_2 amino acid sequence, the
CC   polynucleotide encoding AJ172_2 was obtained from a human adult testes
CC   cDNA library. The invention relates to secreted human and murine
CC   proteins. The polynucleotides and proteins are predicted to have
CC   biological activities which would make them suitable for treating,
CC   preventing or ameliorating medical conditions in humans and animals.
CC   Detection of the levels of the proteins can be used for the diagnosis of
CC   e.g. pre-eclampsia, placental pathology or cancer. Agents which modulate
CC   the expression or function of the proteins may be used for treating a
CC   neoplastic disease and inhibiting metastasis. Other suggested activities
CC   include nutritional activity (e.g. in feeds), cytokine and cell
CC   proliferation/differentiation activity, immune stimulating (e.g. as
CC   vaccines) or suppressing activity, haematopoiesis regulating activity,
CC   tissue growth activity, activin/inhibin activity,
CC   chemotactic/chemokinetic activity, haemostatic and thrombolytic activity,
CC   receptor/ligand activity, anti-inflammatory activity, cadherin/tumour
CC   invasion suppressor activity, and tumour inhibition activity. The
CC   polynucleotide sequences are also stated to be useful for gene therapy

PT Identifying a compound for treating a subject with or at risk of
PT developing preeclampsia, comprises determining whether the expression or
PT activity of syncytin in the cell is modulated in the presence of a test
PT compound.
XX
PS Disclosure; Page 42-43; 43pp; English.
XX
CC The invention relates to identifying compounds which are modulators of
CC syncytin expression. The syncytin modulators are useful in diagnosis and
CC treatment of preeclampsia and gestational trophoblast disorders (e.g.
CC choriocarcinoma, hydatiform mole, placental site tumour and missed/
CC incomplete abortion). Syncytin is a human gene derived from the envelope
CC gene of human endogenous defective retrovirus, HERV-W. The present
CC invention is based partly on the discovery that syncytin expression is
CC dramatically reduced in preeclampsia, and is also mis-localised to the
CC apical syncytiotrophoblast membrane. The present sequence is human
CC syncytin protein

PT  Proteins AZ3021 encoded by clone AZ3021 from human adult colon, and
PT  BD12716 encoded by clone BD12716 from human fetal kidney cDNA library,
PT  useful for treating e.g. multiple sclerosis and rheumatoid arthritis.
XX
PS  Disclosure; SEQ ID NO 135; 412pp; English.

XX
CC The invention relates to a protein comprising fully defined AZ302 1
CC protein or BD127 1 6 protein. The polynucleotides are useful for
CC expressing recombinant proteins for analysis and are also useful as
CC chromosome markers or tags to identify chromosomes or to map related gene
CC positions. The proteins are useful as amino acid supplement, carbon
CC source, nitrogen source and carbohydrate source. The proteins are useful
CC for treating various immune deficiencies and disorders (e.g. severe
CC combined immunodeficiency (SCID)), autoimmune disorders (e.g. multiple
CC sclerosis, systemic lupus erythematosus, rheumatoid arthritis), allergic
CC reactions (e.g. asthma), myeloid or lymphoid cell deficiencies,
CC osteoporosis or osteoarthritis, peripheral nervous system diseases (e.g.
CC peripheral neuropathy, Alzheimer's disease, Parkinson's disease),
CC coagulation disorders, inflammatory diseases (e.g. systemic inflammatory
CC response syndrome (SIRS), ischaemia-reperfusion injury, Crohn's disease),
CC anaphylaxis and hypersensitivity. Proteins are also useful for inducing
CC tumour immunity, for inducing bone, cartilage, tendon, ligament and/or
CC nerve growth or regeneration, for proliferating neural cells and for
CC regenerating nerve and brain tissue, for inducing fertility and for
CC inhibiting tumour growth. Proteins are also useful as chemokine for
CC mammalian cells (e.g., monocytes, fibroblasts, neutrophils), and also
CC useful as inhibitors of receptor/ligand interactions. The present
CC sequence represents the amino acid sequence of a human secreted protein.

PT a viral protein or its fragment, useful for the manufacture of a vaccine
PT for treating or preventing viral infections or cancer.
XX
PS Claim 38; SEQ ID NO 116; 262pp; English.
XX
CC The invention describes a polypeptide of 7-20 amino acid residues, which
CC is capable of modulating the immunosuppressive properties of a viral
CC protein or its fragment, against the host in which it is expressed
CC (immunosuppression-modulatory sequence) when it substitutes the
CC homologous sequence of the viral protein or its fragment, the polypeptide
CC comprising the minimum following consensus amino acid sequence of (I).
CC Also described are: a mutated ENV protein resulting from the mutation of
CC a wild type ENV protein essentially carrying the following sequence: NY 1
CC Y 2 Y 3 LY 4 Y 5 LY 6 Y 7 Y 8 X 1 Y 9 Y 10 Y 11 CY 12 X 2 (II); a nucleic
CC acid coding for the polypeptide or the mutated ENV protein; an eukaryotic
CC or prokaryotic expression vector comprising the nucleic acid as well as
CC the elements necessary for the expression of the nucleic acid; a
CC recombinant cell comprising the nucleic acid or the eukaryotic or
CC prokaryotic expression vector; a pharmaceutical or a vaccine composition
CC comprising as active substance: at least one polypeptide, mutated ENV
CC protein or its fragments, nucleic acid, prokaryotic or eukaryotic
CC expression vector, or recombinant cell; in association with a
CC pharmaceutically acceptable carrier; and antibodies or their fragments,
CC scFv polypeptides, aptamers, or binding peptides, directed against
CC mutated ENV proteins, provided that the antibodies or their fragments,
CC scFv polypeptides, aptamers, or binding peptides do not bind to the
CC corresponding wild type ENV proteins. The first mutation of a first amino
CC acid and optionally of a second mutation of a second amino acid in a wild
CC type viral envelope (ENV) protein is useful for manufacturing a mutated
CC ENV protein having a modified immunosuppressive activity with respect to
CC the wild type ENV protein. The protein is useful for the manufacture of a
CC medicament or a vaccine intended for the prevention and/or the treatment
CC of viral diseases, such as HTLV or FeLV infections; cancer; pathologies
CC requiring an inhibition of the immune system, such as autoimmune
CC diseases, allergies or graft rejections. The protein is also useful for
CC screening compounds liable to modulate the immunosuppressive activity of
CC viruses or tumor cells, where the compounds to screen are peptides, in
CC particular peptides comprising from 5-30 amino acids, such as peptides
CC originating from combinatorial peptide libraries. This is the amino acid
CC sequence of HERV envelope protein.

PT   New polypeptide capable of modulating the immunosuppressive properties of
PT   a viral protein or its fragment, useful for the manufacture of a vaccine
PT   for treating or preventing viral infections or cancer.
XX
PS   Claim 38; SEQ ID NO 118; 262pp; English.
XX
CC   The invention describes a polypeptide of 7-20 amino acid residues, which
CC   is capable of modulating the immunosuppressive properties of a viral
CC   protein or its fragment, against the host in which it is expressed
CC   (immunosuppression-modulatory sequence) when it substitutes the
CC   homologous sequence of the viral protein or its fragment, the polypeptide
CC   comprising the minimum following consensus amino acid sequence of (I).
CC   Also described are: a mutated ENV protein resulting from the mutation of
CC   a wild type ENV protein essentially carrying the following sequence: NY 1
CC   Y 2 Y 3 LY 4 Y 5 LY 6 Y 7 Y 8 X 1 Y 9 Y 10 Y 11 CY 12 X 2 (II); a nucleic
CC   acid coding for the polypeptide or the mutated ENV protein; an eukaryotic
CC   or prokaryotic expression vector comprising the nucleic acid as well as
CC   the elements necessary for the expression of the nucleic acid; a
CC   recombinant cell comprising the nucleic acid or the eukaryotic or
CC   prokaryotic expression vector; a pharmaceutical or a vaccine composition
CC   comprising as active substance: at least one polypeptide, mutated ENV
CC   protein or its fragments, nucleic acid, prokaryotic or eukaryotic
CC   expression vector, or recombinant cell; in association with a
CC   pharmaceutically acceptable carrier; and antibodies or their fragments,
CC   scFv polypeptides, aptamers, or binding peptides, directed against
CC   mutated ENV proteins, provided that the antibodies or their fragments,
CC   scFv polypeptides, aptamers, or binding peptides do not bind to the
CC   corresponding wild type ENV proteins. The first mutation of a first amino
CC   acid and optionally of a second mutation of a second amino acid in a wild
CC   type viral envelope (ENV) protein is useful for manufacturing a mutated
CC   ENV protein having a modified immunosuppressive activity with respect to
CC   the wild type ENV protein. The protein is useful for the manufacture of a
CC   medicament or a vaccine intended for the prevention and/or the treatment
CC   of viral diseases, such as HTLV or FeLV infections; cancer; pathologies
CC   requiring an inhibition of the immune system, such as autoimmune
CC   diseases, allergies or graft rejections. The protein is also useful for
CC   screening compounds liable to modulate the immunosuppressive activity of
CC   viruses or tumor cells, where the compounds to screen are peptides, in
CC   particular peptides comprising from 5-30 amino acids, such as peptides
CC   originating from combinatorial peptide libraries. This is the amino acid
CC   sequence of HERV envelope protein.

XX
CC  The invention comprises the amino acid and coding sequences of novel
CC  proteins. The DNA and protein sequences of the invention are useful as:
CC  markers for tissues in which the corresponding protein is preferentially
CC  expressed; as molecular weight markers on gels; as chromosome markers or
CC  tags; to identify chromosomes or to map related gene positions; and to
CC  compare with endogenous DNA sequences in patients to identify potential

```
CC   genetic disorders. The present amino acid sequence was used in the
CC   exemplification of the invention.

CC The present invention describes isolated polynucleotide sequences (I),
CC which encode polypeptides (II) with biological activity. Also described:
CC (1) a vector comprising (I); (2) an expression vector comprising (I); (3)
CC a host cell genetically engineered to comprise (I) which is operatively
CC associated with a regulatory sequence that modulates expression of (I) in
CC the host cell; (4) a polypeptide (II) encoded by (I); (5) a composition
CC comprising the polypeptide of (4) and a carrier; (6) an antibody directed
CC against the polypeptide of (4); (7) detecting (I) or the polypeptide of
CC (4) in a sample; (8) identifying a compound that binds to the polypeptide
CC of (4); (9) producing the polypeptide of (4); and (10) a collection of
CC polynucleotides comprising at least one of the polynucleotide sequences
CC (I). The polynucleotides (I) can be used as hybridisation probes,
CC oligomers or primers, for chromosome or gene mapping, for the recombinant
CC production of proteins, and for generating antisense DNA or RNA. The
CC present sequence represents a human contig polypeptide sequence, which is
CC used in an example from the present invention.

PS   Claim 57; Page 94-95; 97pp; English.
XX
CC   The invention relates to human embryogenesis associated proteins (EMBRY)
CC   and nucleic acid molecules encoding such proteins. EMBRY sequences are
CC   useful for screening modulators useful for treating or preventing
CC   disorders associated with abnormal expression of EMBRY. The disorders
CC   treated include reproductive disorders such as infertility,
CC   endometriosis, endometrial or ovarian tumour; autoimmune/inflammatory
CC   disorder such as acquired immune deficiency syndrome (AIDS), allergies,
CC   contact dermatitis; disorders of the placenta such as preeclampsia,
CC   abruptio placentae etc. Sequences of the invention are also useful for
CC   analysing a proteome of a tissue or a cell type. EMBRY proteins are
CC   useful as immunogens for preparing antibodies. Polynucleotides of the
CC   invention are useful for creating knockin humanised animals or transgenic
CC   animals to model human diseases. They are also used in gene therapy. The
CC   present sequence is human EMBRY-2 protein

PT   Compound for treating pathologies connected with MSRV/HERV-W protein
PT   contains antibodies capable of bonding specifically with soluble
PT   fraction.
XX
PS   Disclosure; Fig 1; 51pp; French.
XX
CC   This invention relates to a novel composition comprising at least one
CC   antibody selected from anti-Env-SU MRSV/HERV-W or the group of anti-TLR4
CC   antibodies capable of bonding specifically with soluble fraction of the
CC   Env MRSV/HERV-W protein or the TLR4 receptor of the same protein, in a
CC   pharmaceutically acceptable vehicle or vector. The invention may be
CC   useful for the development of compounds with a neuroprotective or
CC   neuroleptic activity. The composition is useful for treating pathologies
CC   associated with MRSV/HERV-W such as multiple sclerosis and schizophrenia.
CC   The antibodies combat the inflammatory activity of the proteins causing
CC   the pathologies. The present sequence is that of the MRSV/HERV-W Env-p14
CC   protein from which the Env-Su protein, the soluble fragment of Env-pV14
CC   which was used during the development of the novel compositions of the
CC   invention, was obtained.

PT   Nucleotide fragment of LTR-RU5 region from Multiple Sclerosis retrovirus
PT   (MSRV) used to detect the presence of MSRV-1 retrovirus in a biological
PT   sample.
XX
PS   Disclosure; Fig 2; 23pp; English.
XX
CC   The present sequence is encoded by a nucleotide sequence corressponding
CC   to the 3' env region and long terminal repeat sequences from clone CL6 of
CC   Multiple Sclerosis retrovirus (MSRV-1). The specification describes a
CC   long terminal repeat (LTR)-RU5 region which encodes the expression of a
CC   MSRV-1 protein. This is unusual for LTRs, in particular in the RU5
CC   region. Probes and antibodies to the MSRV-1 retrovirus protein and
CC   encoding polynucleotide sequences are used to detect the presence of MSRV
CC   -1 retrovirus in a biological sample. (Updated on 06-AUG-2003 to correct
CC   OS field.)

PT   New nucleic acid from retroviruses - useful for diagnosis, prevention and
PT   treatment of, e.g. multiple sclerosis.
XX
PS   Disclosure; Page 185-187; 286pp; English.
XX
CC   The present sequence represents a multiple sclerosis (MS) associated
CC   retrovirus (MSRV) protein used in the method of the invention. The
CC   invention provides complete or partial genomic sequences of the MSRV-1
CC   pol gene, gag gene and env gene, and polypeptides encoded by these genes.
CC   The invention also provides antibodies raised against the polypeptides.
CC   The genomic sequences, polypeptides and antibodies are also claimed
CC   useful for diagnosing infection by MS and rheumatoid arthritis-associated
CC   viruses, and also for prevention and treatment of infection with these
CC   viruses

PT   Nucleic acid sequences of retrovirus called MSRV-1 - associated with
PT   multiple sclerosis or rheumatoid polyarthritis.
XX
PS   Claim 2; Page 38-39; 83pp; French.
XX
CC   This sequence represents the protein encoded by clone C15 from a novel
CC   multiple sclerosis related virus type 1 (MSRV1). The sequence can be used
CC   in diagnostic, prophylactic or therapeutic compositions to inhibit
CC   expression of a multiple sclerosis related virus and/or virus associated
CC   with rheumatoid polyarthritis. (Updated on 27-AUG-2003 to correct OS
CC   field.) (Updated on 17-OCT-2003 to standardise OS field)

PT   New isolated nucleic acid and their fragments having the pol gene of a
PT   retrovirus, useful for diagnosing, preventing and/or treating multiple
PT   sclerosis and/or rheumatoid arthritis.
XX
PS   Disclosure; SEQ ID NO 106; 193pp; English.
XX
CC   The invention relates to an isolated nucleic acid which comprises the pol
CC   gene of a retrovirus associated with multiple sclerosis or rheumatoid
CC   arthritis. The methods and compositions of the present invention are
CC   useful for diagnosing, preventing and/or treating multiple sclerosis
CC   and/or rheumatoid arthritis. The present sequence is used in the
CC   exemplification of the invention.

PT   New isolated or purified nucleic acid associated with multiple sclerosis
PT   and/or rheumatoid arthritis, useful for detecting a virus associated with
PT   multiple sclerosis or rheumatoid arthritis in a biological sample.
XX
PS   Claim 31; Page 78-80; 193pp; English.
XX
CC   The invention relates to an isolated or purified nucleic acid from a
CC   virus associated with multiple sclerosis and/or rheumatoid arthritis,
CC   multiple sclerosis-associated virus (MSRV)-1. The nucleic acids comprise
CC   pol, gag or reverse transcriptase genes (or their fragments) encoding the
CC   proteins or defined peptides (including immunodominant peptides,
CC   antigenic peptides or conserved motifs).Also included are a process for
CC   detecting a virus associated with multiple sclerosis or rheumatoid
CC   arthritis in a biological sample, a nucleic acid probe for the detection
CC   of a virus associated with multiple sclerosis or rheumatoid arthritis, a
CC   primer for the amplification by polymerisation of a nucleic acid of a
CC   viral material associated with multiple sclerosis or rheumatoid
CC   arthritis, a polypeptide exhibiting an inhibitory activity on the
CC   proteolytic, reverse transcriptase or ribonuclease H activity from MSRV,
CC   and an antibody directed against the MSRV-1 virus obtained by
CC   immunologically reacting a human or animal body or cells with an
CC   immunogenic agent consisting of the antigenic polypeptide defined above.
CC   The nucleic acids are useful for detecting a biological sample a virus
CC   associated with multiple sclerosis or rheumatoid arthritis, or for
CC   detecting in a biological sample, the presence of or exposure to a virus
CC   associated with multiple sclerosis or rheumatoid arthritis. The present
CC   sequence is a claimed MSRV-associated sequence whose identity cannot be
CC   accurately determined. Note: The SEQ ID numbers for the sequences as
CC   displayed in the main body of the patent do not match the SEQ ID numbers
CC   in the sequence listing. Consequently those sequences mentioned in the
CC   claims may not be the sequences the authors intended to claim.

PT Compound for treating pathologies connected with MSRV/HERV-W protein
PT contains antibodies capable of bonding specifically with soluble
PT fraction.
XX
PS Disclosure; SEQ ID NO 1; 51pp; French.
XX
CC This invention relates to a novel composition comprising at least one
CC antibody selected from anti-Env-SU MRSV/HERV-W or the group of anti-TLR4
CC antibodies capable of bonding specifically with soluble fraction of the
CC Env MRSV/HERV-W protein or the TLR4 receptor of the same protein, in a
CC pharmaceutically acceptable vehicle or vector. The invention may be
CC useful for the development of compounds with a neuroprotective or
CC neuroleptic activity. The composition is useful for treating pathologies
CC associated with MRSV/HERV-W such as multiple sclerosis and schizophrenia.
CC The antibodies combat the inflammatory activity of the proteins causing
CC the pathologies. The present sequence is that of the MRSV/HERV-W Env-SU
CC protein (a portion of the Env pV14 protein) which was used during the
CC development of the novel compositions of the invention.

XX
PS   Claim 27; SEQ ID NO 22834; 487pp; English.
XX
CC   The present invention relates to human single exon nucleic acid probes
CC   (SENP: see AAI10068-AAI28459). The present sequence is a peptide encoded
CC   by one such probe. The SENPs are derived from human HeLa cells. The SENPs
CC   can be used to produce a single exon microarray, which can be used for
CC   measuring human gene expression in a sample derived from human cervical
CC   epithelial cells. By measuring gene expression, the probes are therefore
CC   useful in grading and/or staging of diseases of the cervix, notably
CC   cervical cancer. Note: The sequence data for this patent did not form
CC   part of the printed specification, but was obtained in electronic format
CC   directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT   New spatially-addressable set of single exon nucleic acid probes, useful
PT   for measuring gene expression in sample derived from human breast,
PT   comprises number of single exon nucleic acid probes.
XX
PS   Claim 27; SEQ ID NO 14780; 327pp + Sequence Listing; English.
XX
CC   The invention relates to a spatially-addressable set of single exon
CC   nucleic acid probes for measuring gene expression in a sample derived
CC   from human breast and BT 474 cells. The method involves contacting the
CC   probes with a collection of detectably labelled nucleic acids derived
CC   from mRNA of human breast, and then measuring the label bound to each
CC   probe of the microarray. The probes are useful for verifying the
CC   expression of regions of genomic DNA predicted to encode proteins. They
CC   are useful for gene discovery, and for determining predisposition and/or
CC   prognosing breast disease. Gene expression analysis is useful for
CC   assessing the toxicity of chemical agents on cells. The microarray of
CC   this invention presents a far greater diversity of probes for measuring
CC   gene expression, with far less bias than expressed sequence tag
CC   microarrays. The method is suitable for rapid production of functional
CC   information from genomic sequence. The present sequence is a peptide
CC   encoded by a single exon nucleic acid probe of the invention. Note: The
CC   sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from WIPO
CC   at ftp.wipo.int/pub/published_pct_sequences

PT   Single exon nucleic acid probes for analyzing gene expression in human
PT   hearts.
XX
PS   Claim 15; SEQ ID NO 24128; 530pp; English.
XX
CC   The present invention relates to single exon nucleic acid probes for
CC   measuring human gene expression in a sample derived from human heart (see
CC   ABA21535-ABA41305). The present sequence is a protein encoded by one such
CC   probe. The probes may be used for predicting, measuring and displaying
CC   gene expression in samples derived from the human heart via microarrays.
CC   By measuring gene expression, the probes are useful for predicting,
CC   diagnosing, grading, staging, monitoring and prognosing diseases of the
CC   human heart and vascular system e.g. cardiovascular disease,
CC   hypertension, cardiac arrhythmias and congenital heart disease. Note: The
CC   sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from WIPO

PT Single exon nucleic acid probes for analyzing gene expression in human
PT brains.
XX
PS Example 4; SEQ ID NO 29875; 650pp + Sequence Listing; English.
XX
CC The present invention provides a number of single exon nucleic acid
CC probes which are derived from genomic sequences expressed in the human
CC brain. They can be used to measure gene expression in brain cell samples,
CC which may enable the diagnosis and improved treatment of nervous system
CC diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia,
CC epilepsy and cancers. The present sequence is a protein encoded by one of
CC the probes of the invention

PT Human genome-derived single exon nucleic acid probes useful for analyzing
PT gene expression in human adult liver.
XX
PS Claim 27; SEQ ID NO 30533; 658pp; English.
XX
CC The invention relates to a single exon nucleic acid probe (SENP) (I) for
CC measuring human gene expression in a sample derived from human adult
CC liver, comprising one of 13109 defined nucleotide sequences given in the
CC specification (or complements/ fragments). The probe hybridises at high
CC stringency to a nucleic acid molecule expressed in the human adult liver.
CC (I) may be used for predicting, measuring and displaying gene expression
CC in samples derived from human adult liver. The genes identified may be
CC involved in genetic liver diseases such as cirrhosis,
CC hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which is
CC associated with coronary heart disease. ABG47348-ABG59930 represent human
CC liver single exon encoded peptides of the invention. Note: The sequence
CC information for this patent does not appear in the printed specification
CC but was obtained in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

PT   Novel single exon nucleic acid probe used to measuring gene expression in
PT   a human breast.
XX
PS   Claim 27; SEQ ID NO 14388; 322pp; English.
XX
CC   The present invention relates to novel single exon nucleic acid probes
CC   (see AAI00010-AAI10067). The present sequence is a peptide encoded by one
CC   such probe. The probes are useful for measuring human gene expression in
CC   a human breast sample, where the probe hybridises at high stringency to a
CC   nucleic acid expressed in the human breast. The probes are useful for
CC   predicting, diagnosing, grading, staging, monitoring and prognosing
CC   diseases of the human breast, particularly those diseases with polygenic
CC   aetiology. The diseases include: breast cancer, disorders of development,
CC   inflammatory diseases of the breast, fibrocystic changes, proliferative
CC   breast disease and non-carcinoma tumours. Note: The sequence data for
CC   this patent did not form part of the printed specification, but was
CC   obtained in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PT   Spatially-addressable set of single exon nucleic acid probes, used to
PT   measure gene expression in human lung samples.
XX
PS   Claim 27; SEQ ID NO 29484; 634pp; English.
XX
CC   The invention relates to a spatially-addressable set of single exon
CC   nucleic acid probes for measuring gene expression in a sample derived
CC   from human lung comprising single exon nucleic acid probes having one of
CC   12614 nucleic acid sequences mentioned in the specification, or their
CC   complements or the 12387 open reading frames derived from the 12614
CC   probes. Also included are a microarray comprising the novel set of probes
CC   ; the novel set of probes which hybridise at high stringency to a nucleic
CC   acid expressed in the human lung; measuring gene expression in a sample
CC   derived from human lung, comprising (a) contacting the array with a
CC   collection of detectably labeled nucleic acids derived from human lung
CC   mRNA, and (b) measuring the label detectably bound to each probe of the
CC   array; identifying exons in a eukaryotic genome, comprising (a)
CC   algorithmically predicting at least one exon from genomic sequences of
CC   the eukaryote; and (b) detecting specific hybridisation of detectably
CC   labeled nucleic acids from eukaryote lung mRNA, to a single exon probe,
CC   having a fragment identical to the predicted exon, the probe is included
CC   in the above mentioned microarray; assigning exons to a single gene,
CC   comprising (a) identifying exons from genomic sequence by the method
CC   above and (b) measuring the expression of each of the exons in several
CC   tissues and/or cell types using hybridisation to a single exon
CC   microarrays having a probe with the exon, where a common pattern of
CC   expression of the exons in the tissues and/or cell types indicates that
CC   the exons should be assigned to a single gene; a peptide comprising one
CC   of 12011 sequences, mentioned in the specification, or encoded by the
CC   probes/open reading frames (ORF). The probes are used for gene expression
CC   analysis, and for identifying exons in a gene, particularly using human
CC   lung derived mRNA and for the study of lung diseases such as asthma, lung
CC   cancer, chronic obstructive pulmonary disease (COPD), interstitial lung
CC   disease (ILD), familial idiopathic pulmonary fibrosis, neurofibromatosis,
CC   tuberous sclerosis, Gaucher's disease, Niemann-Pick disease, Hermansky-
CC   Pudlak syndrome, sarcoidosis, pulmonary haemosiderosis, pulmonary
CC   histiocytosis, lymphangioleiomyomtosis, pulmonary alveolar proteinosis,
CC   Karagener syndrome, fibrocystic pulmonary dysplasia, primary ciliary
CC   dyskinesis, pulmonary hypertension and hyaline membrane disease. The
CC   present sequence is a peptide/protein encoded by a single exon probe of
CC   the invention. Note: The sequence data for this patent did not form part
CC   of the printed specification, but was obtained in electronic format
CC   directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT   New human retrovirus HERV-W ENV proteins/peptides having superantigen
PT   activity useful for diagnosing and treating multiple sclerosis.
XX
PS   Claim 1; Fig 7; 94pp; English.
XX
CC   On the basis of the PBS t-RNA motif used for the classification of human
CC   endogenous retrovirus (HERVs) the full length endogenous provirus which
CC   was been located on the long arm of human chromosome 7 (7q21-22) has been
CC   designated HERV-W. The present invention describes proteins or peptides
CC   (I) having superantigen (SAg) activity comprising the ENV protein (ENV)
CC   of HERV-W, the surface protein (SU) and transmembrane (TM) sub-units. (I)
CC   have neuroprotective activity, and can be used in: vaccines; antisense-
CC   therapy; and HERV-W SAg activity-inhibitors. (I) and encoding DNA/RNA are
CC   useful for diagnosing multiple sclerosis (MS) or HERV-W-associated
CC   disorders. (I) are also useful for identifying substances (and optionally
CC   recovering) capable of binding to a retroviral superantigen associated
CC   with MS, substances capable of blocking SAg activity and substances
CC   capable of blocking transcription or translation of HERV-W retroviral
CC   superantigen. A protein or peptide derived from (I), modified to be
CC   devoid of SAg activity and being capable of generating an immune response
CC   against HERV-W retroviral SAg is useful in therapy. Nucleic acid
CC   molecules encoding (I) are useful as vaccines against MS. Substances
CC   capable of blocking SAg activity, capable of binding to a retroviral
CC   superantigen associated with MS, or capable of blocking transcription or
CC   translation of HERV-W retroviral superantigen for use in treating or
CC   preventing MS, obtained using (I) are useful for the treatment and
CC   prevention of MS. (I) and nucleic acids encoding them are useful for
CC   diagnosing autoimmune disease. The present sequence represents the
CC   specifically claimed truncated envelope protein of HERV-W designated GT

XX
CC   This invention relates to a novel isolated polynucleotide comprising a
CC   nucleotide sequence selected from one of 1680 sequences, a mature protein
CC   coding portion of them, an active domain of them and their complementary
CC   sequences. The invention may be useful for the production of compounds
CC   with an antiarthritic, antiparkinsonian, neuroprotective, nootropic,
CC   immunosuppressive, cytostatic, antipsoriatic, antiinflammatory,
CC   antibacterial, antiviral, antifungal or antiparasitic activity. In
CC   addition, the disclosed sequences may be useful for gene therapy. The
CC   polypeptides or their antibodies are useful for treating many diseases
CC   such as arthritis, Parkinson's, Alzheimer's, autoimmune diseases, cancer,
CC   psoriasis, inflammatory bowel disease and infections caused by bacteria,
CC   viruses, fungi or parasites. The present sequence is that of a human
CC   polypeptide of the invention.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

COMMENT     1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
            end enriched, double-strand cDNA was digested with Not I and cloned
            into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
            was normalized. Library was constructed by Life Technologies, a
            division of Invitrogen.

  TITLE     Direct Submission
  JOURNAL   Submitted (20-JUL-2004) Genoscope - Centre National de Sequencage :
            BP 191 91006 EVRY cedex - FRANCE (E-mail : seqref@genoscope.cns.fr
            - Web : www.genoscope.cns.fr)
COMMENT     1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
            end enriched, double-strand cDNA was digested with Not I and cloned
            into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
            was normalized. Library was constructed by Life Technologies, a
            division of Invitrogen.

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoRV sites of the pCMVSPORT 6 vector. Library was not normalized. Library was constructed by Life Technologies, a division of Invitrogen.
This sequence belongs to sequence cluster 4215.r
For more information about this cluster, see
http://www.genoscope.cns.fr/cdna?s=CS0DE012DE12NP1&c=4215.r.

            1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
            end enriched, double-strand cDNA was digested with Not I and cloned
            into the Not I and EcoRV sites of the pCMVSPORT 6 vector. Library
            was not normalized. Library was constructed by Life Technologies, a
            division of Invitrogen.
            This sequence belongs to sequence cluster 4215.r
            For more information about this cluster, see

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoRV sites of the pCMVSPORT 6 vector. Library was not normalized. Library was constructed by Life Technologies, a division of Invitrogen.
This sequence belongs to sequence cluster 4215.r

            1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
            end enriched, double-strand cDNA was digested with Not I and cloned
            into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
            was normalized. Library was constructed by Life Technologies, a
```

division of Invitrogen. This sequence belongs to sequence cluster 4215.r

            1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
            end enriched, double-strand cDNA was digested with Not I and cloned
            into the Not I and EcoRV sites of the pCMVSPORT 6 vector. Library
            was not normalized. Library was constructed by Life Technologies, a
            division of Invitrogen.
            This sequence belongs to sequence cluster 4215.r
            For more information about this cluster, see
            http://www.genoscope.cns.fr/cdna?s=CS0DE013BE10NP1&c=4215.r.

            1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
            end enriched, double-strand cDNA was digested with Not I and cloned
            into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
            was normalized. Library was constructed by Life Technologies, a
            division of Invitrogen. This sequence belongs to sequence cluster
            4215.r

  TITLE     Full-length cDNA libraries and normalization
  JOURNAL   Unpublished (2001)
COMMENT     On May 13, 2003 this sequence version replaced gi:30652931.
            Contact: Genoscope
            Genoscope - Centre National de Sequencage
            2 rue Gaston Cremieux, CP 5706 - 91057 EVRY cedex - FRANCE
            Email: seqref@genoscope.cns.fr, Web : www.genoscope.cns.fr
            1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
            end enriched, double-strand cDNA was digested with Not I and cloned
            into the Not I and EcoRV sites of the pCMVSPORT 6 vector. Library
            was not normalized. Library was constructed by Life Technologies, a
            division of Invitrogen.
            This sequence belongs to sequence cluster 4215.r
            For more information about this cluster, see
            http://www.genoscope.cns.fr/cdna?s=CS0BAE012ZF02_AE01071_1&c=4215.r

            MIPS
            Ingolstaedter Landstr.1, D-85764 Neuherberg, Germany
            This is the 5' sequence of the clone insert. Clone from S. Wiemann,
            Molecular Genome Analysis, German Cancer Research Center (DKFZ);
            Email s.wiemann@dkfz-heidelberg.de; sequenced by Medigenomix
            (Martinsried/Germany) within the cDNA sequencing consortium of the
            German Genome Project. This clone (DKFZp468N179) is available at
            the RZPD Deutsches Ressourcenzentrum fuer Genomforschung GmbH in
            Berlin, Germany. Please contact RZPD for ordering:
            http://www.rzpd.de/cgi-bin/products/cl.cgi?CloneID=DKFZp468N179
            Further information about the clone and the sequencing project is
            available at http://mips.gsf.de/projects/cdna/.

            1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
            end enriched, double-strand cDNA was digested with Not I and cloned
            into the Not I and EcoRV sites of the pCMVSPORT 6 vector. Library
            was not normalized. Library was constructed by Life Technologies, a
            division of Invitrogen.
            This sequence belongs to sequence cluster 4215.r
            For more information about this cluster, see

            1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
            end enriched, double-strand cDNA was digested with Not I and cloned
            into the Not I and EcoRV sites of the pCMVSPORT 6 vector. Library
            was not normalized. Library was constructed by Life Technologies, a
            division of Invitrogen.
            This sequence belongs to sequence cluster 4215.r

  TITLE     Full-length cDNA libraries and normalization
  JOURNAL   Unpublished (2001)
COMMENT     On May 15, 2003 this sequence version replaced gi:30778885.
            Contact: Genoscope
            Genoscope - Centre National de Sequencage
            2 rue Gaston Cremieux, CP 5706 - 91057 EVRY cedex - FRANCE
            Email: seqref@genoscope.cns.fr, Web : www.genoscope.cns.fr
            1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
            end enriched, double-strand cDNA was digested with Not I and cloned
            into the Not I and EcoRV sites of the pCMVSPORT 6 vector. Library
            was not normalized. Library was constructed by Life Technologies, a
            division of Invitrogen.
            This sequence belongs to sequence cluster 4215.r
            For more information about this cluster, see
            http://www.genoscope.cns.fr/cdna?s=CS0BAB002ZG11_CS00184_1&c=4215.r

COMMENT     Clones are derived from the chimpanzee BAC library RPCI-43 This BAC
            end was generated during the R&D process and may have higher chance
            of clone tracking errors.
             PRIMERS
                 Sequencing: T7

            1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
            end enriched, double-strand cDNA was digested with Not I and cloned
            into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
```

```
            was normalized. Library was constructed by Life Technologies, a
            division of Invitrogen. This sequence belongs to sequence cluster
            4215.r
            For more information about this cluster, see
            http://www.genoscope.cns.fr/cdna?s=CS0DI022DE09QP1&c=4215.r.

            Clones are derived from the human BAC library RPCI-11. For BAC
            library availability, please contact Pieter de Jong
            (pieter@dejong.med.buffalo.edu). Clones may be purchased from
            BACPAC Resources (http://bacpac.med.buffalo.edu/ordering) or from
            Research Genet cs (info@resgen.com). BAC end search page:
            http://www.tigr.org/tdb/humgen/bac_end_search/bac_end_search.html.
            This BAC end was generated during the R&D process and may have
            higher chance of clone tracking errors.
            Seq primer: T7
            Class: BAC ends.

            1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
            end enriched, double-strand cDNA was digested with Not I and cloned
            into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
            was normalized. Library was constructed by Life Technologies, a
            division of Invitrogen. This sequence belongs to sequence cluster
            4215.r
            For more information about this cluster, see

  TITLE     Full-length cDNA libraries and normalization
  JOURNAL   Unpublished (2001)
COMMENT     On May 15, 2003 this sequence version replaced gi:30766926.
            Contact: Genoscope
            Genoscope - Centre National de Sequencage
            2 rue Gaston Cremieux, CP 5706 - 91057 EVRY cedex - FRANCE
            Email: seqref@genoscope.cns.fr, Web : www.genoscope.cns.fr
            1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
            end enriched, double-strand cDNA was digested with Not I and cloned
            into the Not I and EcoRV sites of the pCMVSPORT 6 vector. Library
            was not normalized. Library was constructed by Life Technologies, a
            division of Invitrogen.
            This sequence belongs to sequence cluster 4215.r
            For more information about this cluster, see

                     /note="Organ: Placenta; Vector: pT7T3-Pac (Pharmacia) with
                     a modified polylinker; Site_1: EcoR I; Site_2: Not I;
                     NCI_CGAP_Pl6 is a subtracted cDNA library constructed
                     according to Bonaldo, Lennon and Soares, Genome Research,
                     6:791-806, 1996. First strand cDNA synthesis was primed
                     with an oligo-dT primer containing a Not I site. Double
                     stranded cDNA was ligated to an EcoR I adaptor, digested
                     with Not I, and cloned directionally into pT7T3-Pac
                     vector. The oligonucleotide used to prime the synthesis of
                     first-strand cDNA contains a library tag sequence that is
                     located between the Not I site and the (dT)18 tail. The
                     sequence tags for this library are GA, AGGAA. For
                     additional information, contact: Bento Soares,

            1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
            end enriched, double-strand cDNA was digested with Not I and cloned
            into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
            was normalized. Library was constructed by Life Technologies, a
            division of Invitrogen. This sequence belongs to sequence cluster
            4215.r
            For more information about this cluster, see
            http://www.genoscope.cns.fr/cdna?s=CS0BAB005ZC06_CS00428_2&c=4215.r

/note="Vector: pT7T3-Pac (Pharmacia) with a modified polylinker; Site_1: EcoR I; Site_2: Not I; tissues: Cholonic mucosa with Crohns disease, Cholonic mucosa with ulcerative colitis, Fetal thymus, Cervix, Cervical adenosquamous carcinoma, Ligament cells, Prostate carcinoma, Bladder carcinoma, Brain oligodenroga ; NCI_CGAP_Sub9 is a subtracted cDNA library constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tags for this library are CGTC, AACG, GGGCC, GGAAG, TAGC, TAAGC, ATGG, AGACA, ATCAC. For additional information, contact: Bento Soares, bento-soares@uiowa.edu

            Clones are derived from the human BAC library RPCI-11. For BAC
            library availability, please contact Pieter de Jong
            (pieter@dejong.med.buffalo.edu). Clones may be purchased from
            BACPAC Resources (http://bacpac.med.buffalo.edu/ordering) or from
            Research Genet cs (info@resgen.com). BAC end search page:
            http://www.tigr.org/tdb/humgen/bac_end_search/bac_end_search.html.
            Seq primer: SP6
            Class: BAC ends.

                     a modified polylinker; Site_1: EcoR I; Site_2: Not I;
                     NCI_CGAP_Pl6 is a subtracted cDNA library constructed
                     according to Bonaldo, Lennon and Soares, Genome Research,
                     6:791-806, 1996. First strand cDNA synthesis was primed
                     with an oligo-dT primer containing a Not I site. Double
                     stranded cDNA was ligated to an EcoR I adaptor, digested
                     with Not I, and cloned directionally into pT7T3-Pac
                     vector. The oligonucleotide used to prime the synthesis of
                     first-strand cDNA contains a library tag sequence that is
                     located between the Not I site and the (dT)18 tail. The
                     sequence tags for this library are GA, AGGAA. For
                     additional information, contact: Bento Soares,
